Description: Every year a multitude of people venture out into the snow to go snowshoeing, skiing, snowboarding, snowmobiling or climbing. Many are not fully informed of the dangers and the necessary risk management practices. This book, the second in the series, sheds light on last season's fatalities and what went wrong in order to help others learn and improve their own margin of safety.

Fatal Avalanches in the US: 2022-2023 reviews in detail all of the fatal snow avalanches of the season. They are summarized collectively, each is described, and noteworthy factors are discussed. Finally, the common factors and problems behind these tragic events are discussed. This information is invaluable for helping skiers, snowboarders, snowmobilers, climbers, and others avoid such incidents in the future.

This 2nd edition reviews the 30 avalanche fatalities between October 1, 2022 and September 30, 2023 in clear terms with simple and clear snowpack diagrams and no technical obfuscation. The focus is on understanding what went wrong and how risk management could have been improved.

“While it remains our right to venture forth into avalanche terrain it also remains our responsibility to manage our own risk, to our own acceptable level. Hopefully these experiences of others will contribute in some way to that.” – *James Frankenfield, Author*

Fatal Avalanches in the US: 2022-2023: A Review of the Season's Fatal Avalanches is a must-have book for anyone recreating outdoors in winter. It can be found both in Paperback and Kindle form on Amazon at <https://www.amazon.com/Fatal-Avalanches-US-2022-23-Seasons/dp/B0CZHM3PMB/>

ABOUT THE AUTHOR – James Frankenfield is a snow and avalanche professional with decades of experience as a skier/climber, snow scientist and engineer and mountain safety educator. He earned his M.Sc. in Physics in 1990 by studying seasonal snow and avalanches and has done scientific work in the field. In 1993 he started Avalanche-Center.org on USENET and a university gopher server and manages this project on the web to this day. He has climbed, soloed and guided alpine climbs throughout the western US, soloed a section of the Northville-Placid trail in winter in 1984, and has soloed multi-day glacier ski tours in the Alps.
